

SUCCESS STORIES

Name : Smt.Sris Wahlang
Location : Mawphanniew

Ginger is also one of the important crops of West Khasi Hills and farmers depend on it during winter to support their livelihood. The Soft rot of Ginger is the dreaded disease in Ginger that grows in West Khasi Hills and our KVK realised this when we conducted PRA in this adopted village.

This lady is the one who grew the maximum amount of Ginger in this village and this disease does not spared her ginger. Our intervention was that we conducted OFT with the Bio-formulation GF1 that received from Agronomy Division ICAR, NEH Region and found that it managed this disease tremendously and then we conducted FLD for those farmers in this village and neighbouring villages.

This lady raised the production of Ginger from 28.39 t/ha to 32.27t/ha. Now the whole village used this Bio-formulation GF1.
