Method Demonstration on “Low cost vermicompost production using vermibed”

KVK West Khasi Hills had conducted a method demonstration on “**Low cost vermicompost production using vermibed**” for the interested farmers of Nongrang village under Mairang C & RD Block. The programme was started from 5th September 2024 onwards and was participated with 10 farmers. The technology was demonstrated in 4 units in the farmers’ field under the supervision of Dr. E K Marbaniang (SMS Extension). In this programme, lecture and hands on training was conducted with the active participation of the farmers. For this technology, we use a vermibed of size 10x4x2 length x breadth x height (In Feet). Farmers were involved in collection of grasses, chopping, arrangement of cowdung, preparation of cow slurry, fixing the vermibed etc. The arranged materials were then incorporated into the bed. After one month, earthworms were released to the bed.
